Table Formats

The organization database contains the following two tables:

- log_in_attempts
- employees

log_in_attempts

The log_in_attempts table has the following columns:

- event_id: The identification number assigned to each login event
- username: The username of the employee
- login_date: The date the login attempt was recorded
- login_time: The time the login attempt was recorded
- country: The country where the login attempt occurred
- ip_address: The IP address of that employee's machine
- success: The success of the login attempt; FALSE indicates a failed attempt

In the MariaDB shell, these columns are returned as:

```
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |
+----------+----------+------------+------------+---------+-----------------+---------+
```

employees

The employees table has the following columns:

- employee_id: The identification number assigned to each employee
- device_id: The identification number assigned to each device used by the employee
- username: The username of the employee
- department: The department the employee is in
- office: The office the employee is located in

In the MariaDB shell, these columns are returned as:

```
+-------------+-------------+----------+----------------------+-------------+
| employee_id | device_id   | username | department           | office      |
+-------------+-------------+----------+----------------------+-------------+
```
